

A Half Day Seminar, 28 January 2010, Atlet Century Park Hotel, 08.30 – 12.00

ENVIRONMENTALLY FRIENDLY PACKAGING IMPROVES THE ENVIRONMENT

Dear Participants,

Producing waste is a result of using materials inefficiently and costs your business money. The costs are twofold - you'll be wasting money on unused materials and you also have to pay disposal costs. Although you can sometimes use waste as a resource and save money, it is more efficient to reduce waste in the first place.

"Resource productivity" means extracting the most value from resources, making the best use of renewable resources and minimising waste produced. It has the potential to drive down costs by reducing waste and pollution and will create opportunities for growth through process and product innovation. Good environmental practices can reduce your costs by cutting your business' use of raw materials, energy, water and packaging.

WHO SHOULD ATTEND?

Packaging users (Food & Beverage Industries), packaging converter (flexible packaging manufacturers), brand owners, R&D, packaging development, senior packaging specialists, QC/QA, NPD, and all the decision makers on food packaging.

AGENDA:

- 08.00 - 08.30 Registration
- 08.30 - 09.00 Opening Speech by Directorate General Agro Industry, Ministry of Industry
- 09.00 - 09.30 Safety of Food Packaging - BPOM
